STL version v1.0.0.3

Issues in Milestone:

- #7 DataRouter. Live subtitles rework line numbers and color
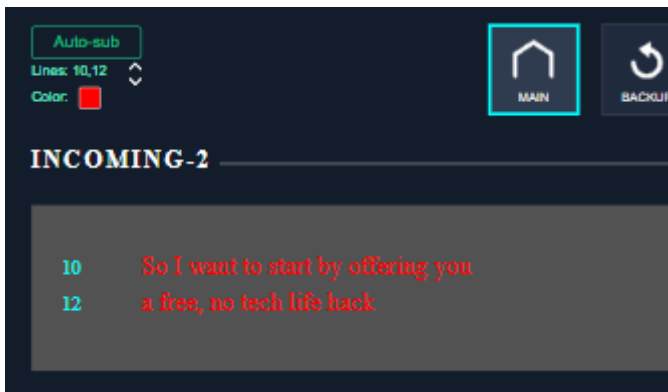

Features:

Subtitles Live Service (ALSService)

The calculation of lines for generating subtitles has been changed. Instead of using 3 lines by default, the number of lines is calculated based on those specified in the configuration file: `ApplicationSettings.json`

```
"subtitle_lines": "8,14"
```

DataRouter. Changing Line Numbers for Subtitles Live Service

- Added display of line numbers from ALS Service settings. Added "Up" and "Down" buttons to the subtitles panel
- Minimum value - 2
- Maximum value - 22
- When you click on the "Down" button, the minimum line increases by +2. All subsequent lines are recalculated taking into account +2 from the original line
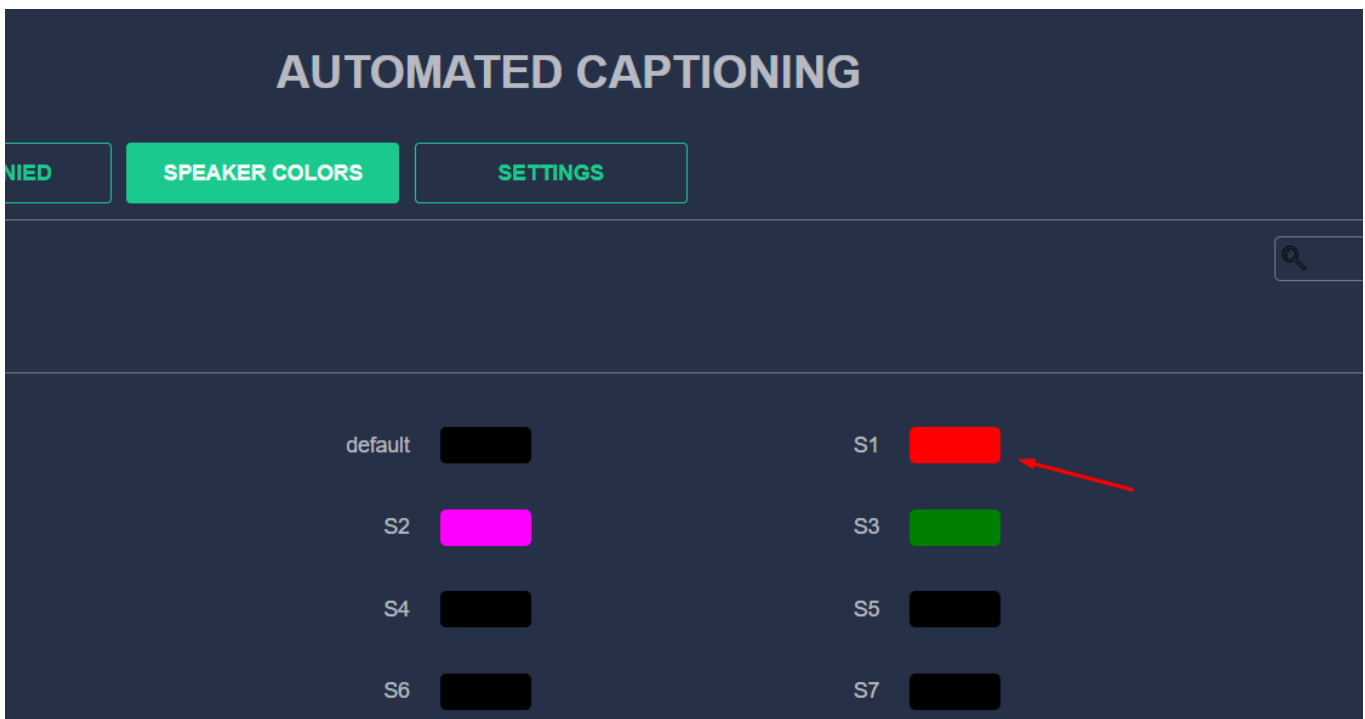

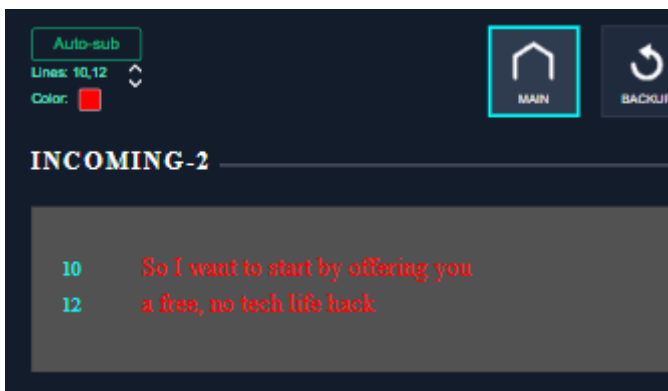

- When you click on the "Up" button, the minimum line is reduced by 2. All subsequent lines are recalculated taking into account +2 from the original line
Example:

1. Current value is "4, 20"
2. Click on the "Down" button
3. New value "6, 8"

DataRouter. Changing subtitle color for Subtitles Live Service

A button has been added to the subtitle panel interface to change the color of Auto-Sub subtitles for speaker "S1".

When you click on the color change button, the following color is set from the list:

```
White/Yellow/Red/Blue/Magenta/Cyan/Black
```

DataRouter. If the AutoSub service is not available, the "Offline" label is displayed
